The graphs show the concentration of various substances over time, specifically focusing on CFC-11, CFC-12, CH₃CCl₃, and CCl₄.

- **CFC-11** shows a peak around 1990 and a gradual decline after that.
- **CFC-12** reaches a peak around 1985 and also shows a decline post-peak.
- **CH₃CCl₃** exhibits a peak in the mid-1990s and a decline thereafter.
- **CCl₄** has a peak in the early 1990s and a sharp decline post-peak.

The graphs are labeled with various locations and concentrations measured at different periods from 1980 to 2015.
